Profile

Hi, my name is Zac and I am a front-end react developer. I have just under two years experience using **html, css, javascript and react**. I have experience using **node, express** and **mongoose** as some of my projects use these technologies and I do Plan on becoming a full stack developer!

These projects that I have created show I can build and deploy web applications. I'm willing to take on any role to get the job done. I'm flexible regarding working in office or remote and I have no problem travelling. I believe my skills, personality and commitment would be of benefit to your company.

Spotify Web Application

This application allows you to view your personal Spotify data from your actual Spotify account, if you have one... I connected this app with the API that Spotify has provided for developers. The technologies used in creating this application were: **react, node, express**.

React Budget Tracker

*A budget tracker sounds simple but making it wasn't so easy, the features are simple such as adding income and subtracting expenses. As this application is linked to a **mongoose** database, your data is saved for next time you load the application.* The technologies used in creating this application were: **react, node, express and mogodb**.

Ecommerce Website

e-commerce platform that I am currently working on. The visuals are done, I am currently working on the functionality such as adding and subtracting from the cart and creating test log ins for users! The technologies used in creating this application were: **react, styled-components**.

Social media app

Social media app that using react, this app is currently only visual and responsive, I do plan on creating a backend for this application soon. The technologies used in creating this application were: **react, sass.**
